

Key Features

- Track devices across organisation, department and the Internet
- Scalable, distributed collection points let you collect locally, view centrally.
- Fully Web based
- Product Licensing
- Track Software Installation and Usage
- Patch Analysis
- Software Auditing
- Hardware Inventory
- Customised Queries on the Data.
- Ensure license compliance
- Automatic breakdown of statistics by Business unit

Tams Auditing & Inventory provides you with accurate software audit and hardware inventory information across organisations, business units, even the internet, allowing you to effectively track and manage all your central and mobile computer IT assets .

From Licensing compliance, Software Usage, Hardware audits **Tams AI** is the intelligent business system designed to give an immediate return on investment, provide long term benefits to service and efficiency and provide you with the information you need to get the job done.

Business Benefits

- ✓ **Immediate savings** through identifying incorrect and unused software
- ✓ **Maximised efficiency & ongoing savings** through effective tracking and usage monitoring of computer hardware and software.
- ✓ **Long Term uplift in service and end user satisfaction levels** Know exactly what software is needed to repair/rebuild PCs, know exactly what PCs can support planned upgrades.
- ✓ **Accurate ongoing License Compliance assurance**

Tams AI will reduce your software licensing costs, showing exactly where you are under or over licensed, and where about in your organisation those licensed products are installed. Tams will identify where installed software is not in use, as well as identifying better alternatives for “in use” software. Tams AI will provide the precise details should rebuilds be required, as well as providing the intelligence needed to plan upgrade/replacement projects. Alongside this Tams AI will provide all the managements reports and statistics needed to ensure you are providing the best service possible .

Fast and Effortless

Tams AI is geared to make managing any size of enterprise a fast and effortless task. Automated agent roll out is easy, the collection system takes care of itself and the web based GUI with its easy to use graphical displays and tables makes guiding you around all areas of the system a quick and intuitive task.

Configurable Reports

Tams AI is delivered with standard reports but has the ability to build up user defined web based query reports based upon any data in the system. These reports can be used to plan and budget for individual and company wide upgrades, machine retirements and software license compliance.

Minimum Management Overheads

With a flexible choice of collection options and automatic deployment allowing you to audit all of your servers, desktops and mobile PCs, **Tams AI** automatically registers users, software, hardware, and devices. The highly configurable auditing facility allows your staff to select particular groups of PCs you wish to examine (e.g. all the PR department PCs). PCs are automatically linked to user name, department or business unit making it easy to identify devices and track back to individuals, departments or sections within your organisation.

License Usage and Installed Products

With **Tams AI** it is quick and easy to ascertain which software the organisation is running and where. Detailed software usage graphs and lists are easily produced. The product list can be customised for your organisation and your software with License requirements being easy and flexibly applied and reviewed. You can even automatically identify if, through what sub elements of a product are actually being used on a PC used, a more cost effect product should be utilised in its place.

As you would expect **Tams AI** allows you to drill down from all summary charts and records to see detailed lists or individual items. **Tams AI** also allows you to drill "up" with the same ease - Spot a piece of software, patch, OS type or PC type etc when looking at the detailed information for a device and one click lets you drill "up" to see a list of the other devices who share that same criteria.

Quick Find	Product Name	License	Status	Usage
